

4/4 controlled directional valve, directly operated, with electric position feedback and integrated electronics (OBE)

RE 29037/11.13
Replaces: 03.10

1/12

Type 4WRPEH10

Size 10
 Component series 2X
 Maximum operating pressure P, A, B 315 bar, T 250 bar
 Rated flow 50...100 l/min (Δp 70 bar)

Type 4WRPEH10

Features

- Directly actuated controlled directional valve, with control spool and sleeve in servo quality
- Single-side operated, 4/4 fail-safe position in deactivated state
- Electric position feedback and integrated electronics (OBE), calibrated in the factory
- Electric port 6P+PE
Signal input of differential amplifier with interface A1 ± 10 V or interface F1 4...20 mA ($R_{sh} = 200 \Omega$)
- Used for electro-hydraulic control systems in production and test plants

With **integrated** electronics = E

Function, section

General

In the field of integrated electronics, the specified command value is compared with the actual position value. In case of deviations from the standard, the lifting solenoid is activated. Due to the changed magnetic force, the lifting solenoid adjusts the control valve against the spring.

Lifting/control cross-section are adjusted proportionally to the command value. In case of a command value provision of 0 V, the electronics adjusts the control valve against the spring to center position. In deactivated condition, the spring is unloaded to a maximum and the valve is in fail-safe position.

Switch-off behavior

If the electronics is switched off, the valve immediately moves to the secured basic position (fail safe).

In this process, the P-B/A-T position is passed which might cause movements at the controlled component. This must be taken into account when designing the plant.

¹⁾ The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and at the same time increases the service life of the components.
For the selection of the filters see www.boschrexroth.com/filter

²⁾ Flow at different Δp $q_x = q_{nom} \cdot \sqrt{\frac{\Delta p_x}{35}}$

Technical notes with regard to cable

- Version:**
- Multi-core wire
 - Litz wire structure, extra fine wire according to VDE 0295, class 6
 - Protective earthing conductor, green-yellow
 - Cu shielding braid
- Type:**
- e.g. Oilflex-FD 855 CP (Company Lappkabel)
- Number of wires:**
- Determined by the valve type, connector type and signal configuration
- Line Ø:**
- 0.75 mm² to 20 m of length
 - 1.0 mm² to 40 m of length
- OuterØ:**
- 9.4...11.8 mm – Pg11
 - 12.7...13.5 mm – Pg16

Note

Supply voltage 24 V = _{nom}, if the value falls below 18 V = an internal fast switch-off is effected which can be compared with "Release OFF".

Additionally for version F1:

$I_{D-E} \geq 3 \text{ mA}$ – valve is active

$I_{D-E} \leq 2 \text{ mA}$ – valve is deactivated.

Electric signals taken out via control electronics (e.g. actual value) may not be used for the switch-off of safety-relevant machine functions! (See also the European standard "Safety requirements for fluid power systems and their components - Hydraulics", EN 982.)
